Pre-Insulated PEX-a Pipes

MrPEX® flexible pre-Insulated distribution piping system is produced using fine-celled polyurethane foam (PUR) for the absolute best insulation features. Our PUR insulation has at least 100x more cells as compared to standard foam insulation, giving a consistent insulation effectiveness over a long time.

The unique manufacturing process with the corrugated polyethylene (PE) jacket gives the pipe more flexibility, which allows for easier installation. The carrier pipes feature 3/4" through 1 1/2" MrPEX® Barrier PEX-a tubing for use in hot water applications. In addition, we also offer water tight end caps, and insulated joint and Tee kits

NOTE: This product currently requires 8-10 week lead time. Please talk to your local MrPEX representative for more details.
