

MRPEX PEX_a PLUMBING ADVANTAGES

- › **Flexibility** – having the freedom to route around obstacles rather than using elbows.
- › **Long term durability** – standard operating temperatures do not cause MrPEX® to turn brittle, melt or freeze.
- › **Color coded** – Red, Blue and White Pex provided for easy identification.
- › **Quiet** – PEX greatly reduces water hammering and also reduces Velocity noise.
- › **Price** – PEX prices are more stable and less susceptible to market fluctuation as compared to copper. You can quote jobs that are months away and not worry about your cost being different at time of sale.
- › **Corrosion free** – MrPEX will not corrode over time because it has no ferrous metals to deteriorate.
- › **No scaling** – PEX is smooth on the inside and does not foster buildup of calcium, minerals or other impurities.
- › **Free of toxins** – No solder/flux is used for joining PEX pipes, therefore exposure to harmful and toxic chemicals is greatly reduced.
- › **High pressure tolerance** – MrPEX will withstand pressures of 100psi at 180° F.
- › **Fast install time** – joints take seconds rather than minutes to connect. The ability to route around an obstacle rather than using elbows, plus having the freedom to run longer than 20' without any fittings.
- › **Light weight** – 100' of PEX is 22lbs lighter than 100' of ½" type M copper.
- › **Worry free kinking** – On the rare occasion PEX does get kinked, MrPEX pipes can be repaired. See page 26 for instructions.
- › **Warranty** – MrPEX provides a 30year warranty on our PEX. (see warranty section)

Let's face it, would you rather drink out of a copper or plastic cup?
